

# Vimium

Modifier keys are specified as <C-X>, <M-X>, and <A-X> for ctrl+x, meta+x, and alt+x respectively. For shift+x and ctrl-shift-x, just type X and <C-X>. See the next section for how to customize these bindings.

## Navigating the current page:

```
?      show the help dialog for a list of all available keys
h      scroll left
j      scroll down
k      scroll up
l      scroll right
gg     scroll to top of the page
G      scroll to bottom of the page
d      scroll down half a page
u      scroll up half a page
f      open a link in the current tab
F      open a link in a new tab
r      reload
gs     view source
i      enter insert mode -- all commands will be ignored
until you hit Esc to exit
yy     copy the current url to the clipboard
yf     copy a link url to the clipboard
gf     cycle forward to the next frame
gF     focus the main/top frame
```

## Navigating to new pages:

```
o      Open URL, bookmark, or history entry
O      Open URL, bookmark, history entry in a new tab
b      Open bookmark
B      Open bookmark in a new tab
```

## Using find:

```
/      enter find mode -- type your search query and hit
enter to search, or Esc to cancel
n      cycle forward to the next find match
N      cycle backward to the previous find match
```

## Navigating your history:

```
H      go back in history
L      go forward in history
```

## Manipulating tabs:

```
J, gT  go one tab left
K, gt  go one tab right
g0     go to the first tab. Use ng0 to go to n-th tab
g$     go to the last tab
^      visit the previously-visited tab
t      create tab
yt     duplicate current tab
x      close current tab
X      restore closed tab (i.e. unwind the 'x' command)
T      search through your open tabs
W      move current tab to new window
<a-p>  pin/unpin current tab
```

## Using marks:

```
ma, mA  set local mark "a" (global mark "A")
`a, `A  jump to local mark "a" (global mark "A")
``      jump back to the position before the previous jump
        -- that is, before the previous gg, G, n, N, / or `a
```

## Additional advanced browsing commands:

```
]], [[  Follow the link labeled 'next' or '>' ('previous' or '<')
        - helpful for browsing paginated sites
<a-f>   open multiple links in a new tab
gi      focus the first (or n-th) text input box on the page.
Use <tab> to cycle through options.
gu      go up one level in the URL hierarchy
gU      go up to root of the URL hierarchy
ge      edit the current URL
gE      edit the current URL and open in a new tab
zH      scroll all the way left
zL      scroll all the way right
v       enter visual mode; use p/P to paste-and-go, use y to
yank
V       enter visual line mode
```

Vimium supports command repetition so, for example, hitting 5t will open 5 tabs in rapid succession. <Esc> (or <c-[>) will clear any partial commands in the queue and will also exit insert and find modes.

Once you have Vimium installed, you can see this list of key bindings at any time by typing ?
